tips for
energy
saving

Prof. dr. Risto Ciconkov

ENERGY

HOW TO SAVE

CONTENTS

1. INTRODUCTION	1
Why to save energy	
Contribution to preparation of a strategy	
Possibilities for energy saving	
2. BASIC KNOWLEDGE FOR ENERGY	10
Various forms of energy	
Heat transfer	
Heat transfer calculations	
3. BUILDINGS	17
Landscaping; passive solar design	
Heat insulation of buildings	
Windows	
4. HEATING	32
Comfort conditions	
Heating	
Individual heating	
Central heating	
Steam heating	
Equipment in the systems of central heating	
Boilers	
Heating units (radiators, convectors)	
5. AIR CONDITIONING	56
Central air systems for air conditioning	
Central air-water systems for air conditioning	
Automatic control of the central air conditioning systems	
Individual and commercial air conditioning units	
Window air conditioners	
Split-system air conditioners	
Ducted split-system air conditioners	
6. REFRIGERATING SYSTEMS	67
Principle of refrigeration	
Refrigerating cycle in pressure-enthalpy (p-h) diagram	
Components of refrigerating systems	

Refrigerating systems with indirect cooling
 Refrigerants
 Calculation of cooling load

7. HEAT PUMPS 75

Principle of work
 Heat pump air to air
 Heat pump water to water
 Heat pump air to water

**8. THERMAL POWER PLANTS AND
 COMBINED HEAT AND POWER** 83

Principle of work of the thermal power plants
 Why not to use electricity for space heating
 Combined heat and power (CHP)

9. ELECTRIC LIGHTING 91

Basic terms of lighting
 Incandescent lamps
 Discharge (fluorescent) lamps
 Control of electric lighting

10. AUTOMATION OF BUILDINGS 97
(for heating, air conditioning and cooling systems)

Automation of houses and small buildings
 Automatic control of residential houses and small buildings
 Automation of buildings
 Control with a variable speed drive (frequency regulation)

**11. VARIOUS ENERGY INDICATORS,
 GLOBAL AND REGIONAL** 107

Global energy supply and energy consumption indicators
 Global energy trends to 2030

12. ENERGY AND CLIMATE CHANGE 117

Climate change; Greenhouse effect
 Some figures for the global warming
 Kyoto Protocol
 National reports of the countries under the UNFCCC

13. EXAMPLES WITH CALCULATIONS OF ENERGY SAVINGS**BASIC CALCULATIONS** 128

Example 1 to 6: Calculations of force, power, heat energy, coefficient of heat transfer

Example 7. Calculation of heat losses for one room

EXAMPLES WITH COMPARISONS AND SAVINGS

Example 8. Electricity consumption for lighting of incandescent lamps and compact fluorescent lamp (CFL)

Example 9. Using day lighting instead electric lighting

Example 10. Electricity consumption of personal computer

Example 11. Influence of setting of indoor room temperature

Example 12. Electricity consumption of electric domestic water heater; Replacement with a solar collector

Example 13. Comparison of costs for various ways of space heating

14. USEFUL TIPS FOR ENERGY SAVING 144

Buildings

Heating

Hot water (bathroom, kitchen)

Electric lighting

Household appliances

 Kitchen stove (electricity and gas)

 Refrigerator

 Washing (and drying) machine

 Dishwashing machine

Computers

TV, radio, video, DVD,

Air conditioners

Automation of buildings

15. VARIOUS DATA 163

Conversion factors for energy units

Prefixes of the measurement units

Caloric values for various fuels

CO₂ emission factors

Thermal properties of materials and elements of buildings

BIBLIOGRAPHY 169

Useful Internet links 172
